

Amendments to the Specification:

Please replace the paragraph on page 8, lines 14-21 with the following paragraph:

In the embodiments described below, the device can engage in an active call when the radio ~~is~~ is ON and either (1) the lid is in an open state (*i.e.*, the lid has been rotated away from the display screen 125) such as the state illustrated in **Figure 1B**, or (2) a single earpiece or full headset 152 has been plugged into a headset plug-in socket 150 of the device 100. One of ordinary skill will realize that these two latter conditions might not necessarily be required in other embodiments. For instance, so long as the radio is ON, some embodiments might default to a speakerphone functionality when the lid is closed and no headset has been plugged into the socket 150.
